DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, drawn to a method of continuous speech recognition system for discriminatively training hidden Markov models using mapping technique, classified in class 704, subclass 235.
 - II. Claim 4, drawn to a method of continuous speech recognition system for discriminatively training hidden Markov models using gradient adjustment technique, classified in class 704, subclass 244.
 - III. Claim 5, drawn to a method of continuous speech recognition system for discriminatively training hidden Markov models by determining correctness of a hypothesized word, classified in class 704, subclass 239.

2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as discriminatively training hidden Markov models using mapping. Subcombination II has separate utility such as discriminatively training hidden Markov models using gradient adjustment technique. Subcombination III has separate utility such as discriminatively training hidden Markov models by determining correctness of a hypothesized word See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a).

Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
